**CORECON TECHNOLOGIES, INC. INTRODUCES CORECON 2007 FALL RELEASE**

Huntington Beach, Calif., December 5, 2007 – Corecon 2007 Fall Release is now available for architecture, engineering, and construction companies in need of a powerful and user-friendly system for managing the complete business, from estimating to project management. This newest offering in Corecon’s stellar lineup of construction management software adds two key features—Online File Management and Customer/Sub Portal Logins—that make internal collaboration and communication with customers quick and simple.

Online File Management allows users to add additional documents, such as pictures and PDFs, to project files, thus increasing the information available while consolidating into one easily accessible location. Because Corecon is a Web-based solution, all project information can be accessed anywhere, anytime. Now, that easy access can be extended beyond internal users to subcontractors or customers through Portal Logins. With these Logins, companies can share project information for secure, repeat access with just an email address and password. This combination of offerings allows a homebuilder to share project photographs with a customer or a contractor to provide contract drawings for subcontractors and suppliers, making the whole process easier and more efficient for all involved.

In addition to these exciting options, Corecon 2007 Fall Release includes new and enhanced features such as:

- A new color scheme for the Main Menu that allows users to incorporate their own corporate logos
- A new bills import option from Microsoft Excel

This Corecon 2007 Fall Release is the latest offering from Corecon Technologies, a known leader in the field of construction management software. Corecon was named one of “Constructech’s Hottest Companies” in 2006 and 2007 by *Constructech Magazine*. Corecon was founded more than a decade ago by experienced construction professionals who understand the architecture, engineering and construction industry and seek to design software that provides cost-effective, user-friendly tools for growing firms. Corecon 2007 Fall Release is just such a tool.
