**CORECON 2007 NAMED “TOP PRODUCT” BY *CONSTRUCTECH* MAGAZINE**

Huntington Beach, Calif., March 17, 2008 – *Constructech* has released the winners of its inaugural Top Products awards for both residential and commercial construction technology, and Corecon 2007 from Corecon Technologies, Inc. was named a winner in the “Enhanced Product” categories for both the residential and commercial awards.

“We are thrilled to receive this honor,” said Norman Wendl, president and founder of Corecon Technologies, Inc. “Corecon constantly strives to improve its product offerings and build on the good faith we have established with our clients. The *Constructech* Top Products Award is confirmation of a job well done.”

Award selection was made on the basis of product description, usefulness, and fit to the construction industry, as well as the product’s customer growth rate in recent years. Corecon 2007 provides architecture, engineering, and construction companies a powerful and user-friendly system for managing their complete business, from initial estimates to the finished projects. This newest version of Corecon’s trusted product adds two key features—Online File Management and Customer/Sub Portal Logins—that make internal collaboration and communication with customers quick and simple.

This ongoing innovation and attention to customer feedback secured Corecon 2007’s place in the “Enhanced Products” category.

“The winners of the *Constructech* Top Products show remarkable innovation in an ever-changing environment. I commend them for helping their customers compete in the marketplace,” said Peggy Smedley, editorial director of *Constructech*. “We are excited to recognize these companies. With this listing of Top Products, *Constructech* hopes to bring our readers a look at the best the industry has to offer.”

Corecon was also named one of “*Constructech*’s Hottest Companies” in 2006 and 2007 after being named one of the magazine’s “Companies to Watch” in past years.

“The products chosen as the 2008 *Constructech* Top Products are innovative, successful, and some of the best of what can be utilized today. *Constructech*’s readers are eagerly adopting the available technology solutions in the commercial construction space,” said Mike Carrozzo, editor of *Constructech* magazine. “As these builders and contractors look to improve their business practices, the solution providers must strive to meet the demand.”

Corecon has been meeting this demand for more than a decade with its experienced construction professionals who understand the architecture, engineering and construction industry and seek to design software that provides cost-effective, user-friendly tools for small to midsize firms. Corecon 2007 is just such a tool, as this latest honor from *Constructech* confirms.
