Corecon Technologies Announces Launch of CoreconLink for MYOB

New project management software link streamlines construction with the integration of project management and accounting for clients in Australia and New Zealand

Huntington Beach, Calif., November 15, 2011 – Corecon Technologies, creator of Corecon V7, a web-based suite of [construction software](#) for the architecture, engineering and construction (AEC) industry, is now offering its customers in Australia and New Zealand a solution to integrate their project management and MYOB accounting software.

[CoreconLink](#) for MYOB will allow Corecon V7 users the ability to combine estimating, project management and accounting into a single, easy-to-use, flexible system. Through this streamlined project management software link, all project team members including accountants and financial controllers can collaborate quickly and effectively. The CoreconLink for MYOB makes a dual connection to Corecon V7 construction software and the contractor's local MYOB database for the purpose of synchronizing customer and vendor information and transferring Corecon project financial transactions such as bills, progress invoices, and timecards. This exchange of critical information will help small to medium size businesses that use both products become more efficient by eliminating duplicate data entry and saving them time, money and resources.

“Studies have proven that construction businesses who centralize their information, work smarter and faster,” said Corecon Technologies President Norman Wendl. “Offering general contractors, homebuilders and subcontractors a turnkey system to handle their project functions while integrating with their existing accounting system is one of Corecon’s most unique and beneficial features.”

“EcoU Group has been successfully using Corecon Technologies project management software Corecon V7 to help manage our home building projects,” said Bradley Warren of [EcoU Group](#) in Queensland, Australia. “The new integration of Corecon V7 with MYOB accounting software will allow us to save time, money and effort on data entry while providing EcoU Group with additional time to focus less on administration and more on our core business of designing and building affordable homes using the most technologically advanced sustainable resources and building practices to ensure top quality real estate for all shareholders.”

This collaboration with MYOB will be the fourth in the CoreconLink product family, which also includes links to Intuit QuickBooks U.S., Canada and UK editions; SAP® Business One and Sage Simply Accounting. CoreconLink for MYOB is an add-on to Corecon V7, and can be easily

downloaded from within Corecon V7. A multiple user license is available for a one time fee of \$200.

About Corecon Technologies

Corecon Technologies provides software solutions for general contractors, subcontractors, homebuilders, remodelers, developers, engineering and professional service firms. Corecon's flagship product, Corecon V7, has been recognized as one of *Constructech* Magazine's Top Residential and Commercial Products in 2011 and the firm has been named *Constructech's* Hottest Companies and Companies to Watch in the past years. Utilizing the latest Web technologies, Corecon's online [construction software](#) suite provides constant connectivity anywhere, anytime whether using a laptop, netbook, tablet or mobile phone. The firm is the only company with a web-based suite of construction software on the market that provides business development, estimating, document control, contract administration, job cost control, scheduling and collaboration with integration options to popular accounting systems such as Intuit Quickbooks or SAP Business One®. Based in Huntington Beach, Calif., the company was founded more than a decade ago by construction industry experts who seek to design software that provides cost-effective, user-friendly tools to ensure successful project delivery.
